

Mohsen Abdolahi

BACKEND SOFTWARE ENGINEER

Iran, Fars

☎ (+98) 9390433026 | ✉ mohsen12abdolahi@gmail.com | 🏠 mohsenabdolahi.ir | 💬 MsN-12 | 🌐 mohsen-abdolahi

Summary

Backend Software Engineer focused on building reliable and scalable backend systems with C#/.NET, Go, Linux, Docker, and CI/CD workflows. Experienced in game backend development, API design, server infrastructure, monitoring, and deployment automation. Combines technical execution, product-minded thinking, clear communication, and ownership to deliver stable, maintainable systems.

Work Experience

Baramjk

Remote, Kuwait

Backend Developer

Dec. 2024 - June. 2026

- Developed backend features for multiple business applications within a shared C#/.NET codebase powering 100+ web and mobile deployments, where production changes required careful consideration of cross-project impact.
- Designed and implemented an internal server management dashboard that streamlined operational tasks, including project cloning, server inventory, plugin management, and automated log maintenance for administrators.
- Collaborated closely with frontend and mobile developers to design, document, and integrate REST APIs, creating and maintaining comprehensive Postman collections and providing technical guidance throughout the integration process.
- Integrated backend services with third-party asset management platforms to automate resource handling and simplify deployment workflows.

Morvarid Game Studio

Bushehr, Iran

Backend Developer & Server Manager

Dec. 2023 - July. 2026

- Developed the backend for the Namdaran multiplayer game using Go and Nakama, implementing matchmaking, leaderboards, tournaments, clans, chat, inventory, shop, and purchase validation.
- Built a real-time event analytics platform in Go using an HTTP collector, Redpanda/Kafka-compatible streaming, batch consumers, ClickHouse, PostgreSQL, and REST APIs for events, metrics, funnels, and user/project management.
- Developed the backend for the Dataa Quiz game using C#, implementing authentication, matchmaking, player profiles, shop, question management, and administrative tools.
- Managed Linux production servers and Docker environments, implementing CI/CD pipelines with GitHub Actions, blue-green deployments using HAProxy, and monitoring with Grafana, Loki, and Promtail.
- Reviewed, tested, and merged server-side code contributions, maintained technical documentation, and collaborated with Unity developers to troubleshoot RPC communication and gameplay APIs.
- Developed DevLoop, a React-based internal management panel for player notifications and report moderation workflows.

PGU APA

Bushehr, Iran

Penetration Tester

Nov. 2022 - Dec. 2023

- Conducted web application penetration testing using the OWASP Testing Methodology.
- Participated in Capture The Flag (CTF) competitions, solving web, network, and security challenges as part of a team.
- Strengthened practical knowledge of Linux systems, networking, and offensive security techniques through hands-on training and security research.

Technical Skills

- **Backend:** C#, ASP.NET Core, Go, Nakama, REST APIs, MVC
- **Databases & Storage:** PostgreSQL, SQL Server, ClickHouse, Redis
- **Infrastructure:** Linux, Docker, Nginx, HAProxy, GitHub Actions
- **Streaming & Messaging:** Redpanda, Kafka, RabbitMQ
- **Observability:** Grafana, Loki, Promtail
- **Architecture & Quality:** Clean Architecture, Feature-Based Architecture, DDD, Microservices, Event-Driven Architecture, OWASP, TDD
- **Technical Exposure:** MongoDB, Elasticsearch, Kubernetes, Next.js, TypeScript, Blazor

Education

PGU(Persian Gulf University)

B.S. in Computer Science and Engineering

Bushehr, Iran

2020 - 2024

Honors & Awards

- | | | |
|------|--|------------------------------------|
| 2023 | Top 10 , Quera security Hackathon | Certification Link |
| 2023 | Participate , Quera C# and .NET Hackathon | Certification Link |
| 2023 | Top Winners , Quera Irancell labs Artificial Intelligence Hackathon | Certification Link |
